F2 Science Research Class

How to write scientific literature review?

Name: _____( )

What is scientific literature review?

A scientific literature review is a ***critical account of what has been published on a topic by accredited researchers***.

A literature review is a survey of scholarly sources on a specific topic. It provides ***an overview of current knowledge***, allowing you to identify relevant theories, methods, and gaps in the existing research.

It is an essential part of your research process ***to show what you know about a topic***.

The review may be:
- a stand-alone assignment;
- an introduction to an essay, report, thesis…..etc;
- a part of the proposal of research or grant.

Literature review should NOT be:
- a summary of articles;
- personal opinions;
- a chronological history of events;
- a report.

A scientific literature review should contain:
- clear statement of the topic you choose / interested / going to study;
- provide a numbers of search for relevant literatures / articles on the topic;
- critical analysis on the topic
- provide possible further research

Searching of literatures
1. Online resources (google scholar / books) [Note]
2. Library (universities / official scientific association websites e.g. chemistry review, royal society of chemistry…..

Note: Literature Searches
Using Google Scholar on searching previous reviews on specific topics can provide information on any new findings. The following points should be considered when doing the searches:
(i) The author and any possible conflicting interests
(ii) The purpose of the article
(iii) The hypothesis of author and whether it is supported
(iv) How the literature will contribute to your topic
(v) Whether opinions expressed by the author(s) are correct

Searching Techniques

Title

Panax notoginseng Enhances Wound Healing Efficiency and Quality on Diabetic Rats

Authors' name

Natelie Cho, Cheuk Yan Lee, Kwan Ming Lee, Wai Yin Li, Hiu Yee Kwan and Kevin Kin Man Yue*

Authors' affiliations

School of Chinese Medicine, Hong Kong Baptist University, Hong Kong, China

Summary

Diabetic patients are known to have impaired wound healing and a higher risk of diabetic foot ulcer, which may result in amputation. However, drug dressing for promoting wound healing is rarely found. Most commercial dressings can only address the basic needs for diabetes and usually requires a much longer healing time than for non-diabetes. Sanqi, *Notoginseng Radix et Rhizoma*, is traditional Chinese medicine that shown the effect on treating hemorrhage can be a solution for diabetic wound.

Aims/hypothesis: Sanqi, Latin Pharmaceutical Name is *Notoginseng Radix et Rhizoma*, a traditional Chinese medicine that shown the effect on treating hemorrhage, may play a role in efficient wound healing in diabetic subjects. We tested whether Sanqi contribute to the healing effect of diabetic wound healing.

Methods: In this study, the effects of Sanqi on wound healing in both diabetic and non-diabetic animals were investigated. In the animal model, SD rats (male: 200g, 2-3 months old) were induced diabetes by intraperitoneal injection, Streptozotocin (STZ) (50mg/kg/day) or sham control (0.1M sodium citrate, pH 4.5) for 2 continuous days. By excising the dorsal skin portion (2cmx2cm), full thickness wounds were created in rats. In each rat, the wound was treated with (a) alginate dressing, and (b) Sanqi alginate dressing. Following the treatment, digital images of the wound site were made twice a week for 3 weeks. HPLC was conducted to indicate the majority active components present in Sanqi, which may participate in the wound-healing event. And the antimicrobial ability of Sanqi in alginate dressing was evaluated.

Results: In both diabetic and non-diabetic animals, higher wound healing rate was found under the treatment of *Panax notoginseng* when comparing with both positive and negative controls.

Conclusion/interpretation: Our results, therefore, suggested *Panax notoginseng* might contribute in promoting diabetic wound healing efficiency.

Keywords: Diabetes; Herbal therapy; *Notoginseng Radix et Rhizoma*; Sanqi; Wound Healing

Clinically, the aim of the diabetic ulcers management is to provide a moist and clean environment that favors the wound healing [3,4]. It requires offloading the wound by using daily saline or similar dressings to provide a moist wound environment. However, most clinical dressings can only address the basic needs for wound healing while diabetic wounds usually require a longer healing time than for non-diabetes. The healing of wounds in diabetic subject is generally delayed due to peripheral arterial insufficiency, high blood glucose and continuous inflammatory response [5]. Prolonged wound healing causes higher risk of presenting osteomyelitis or cellulitis that may result in amputation.

Sanqi, *Notoginseng Radix et Rhizoma*, is traditional Chinese medicine that shown the effect on treating hemorrhage. It officially joined the Chinese materia medica during the 16th century [6,7]. Due to its ability to treat all blood disorders, it is the main ingredient of the well-known patent medicine Yunnan Baiyao, which was first marketed in 1902 and remains a favorite emergency remedy for acute bleeding

The Effect of Augmented Fork

2A 李道生

Abstract

An augmented fork is a fork which contains sensors and actuators that provide real-time vibrotactile feedback on eating rate, when the user eats too fast, users will feel a gentle vibration in the handle of the fork. (Roel C.J. Hermans, PhD 2016, a). Studies show people who used the augmented forks (test group) tended to eat slower than the people from the controlled group. Also, people from the test group lost their weight during the experiment period (Roel C.J. Hermans 2019). This proves that augmented fork is a viable tool to reduce eating rate in naturalistic settings and it could support long-term weight loss strategies, despite one of the studies showing that lowering the rate of eating did not lead to a significant reduction in the amount of food consumed (Roel C.J. Hermans 2016, b).

Introduction

Can people lose their weight by using the augmented fork? Can
just a rumor? The worldwide prevalence of overweight and obesity ar
studies had shown that people who eat quickly tend to consume mor
body mass index (Hideaki Toyoshima 2006), whereas people who ea

Video Games and Health Care

2F 黃柏諭

Introduction

Most people think of video games as a entertainment. There is a growing interest, however, of using video games to educate and train people (Durkin, 2010). "Serious games" is a term that has been used to describe video games that have been designed for training and education (Annetta, 2010). The field of medicine has a history of embracing games to engage patients behaviorally to improve their health outcomes. There are reports of case studies using video games with patients who are experiencing diseases or physical disabilities (Krichevets, Sirotkina, Yevsevecheva, & Zeldin, 1994; Szer, 1983). Some of the treatment which video games are used will be discussed in this review.

Treatment for Anxiety

Relax to Win, which is a biofeedbackbased 2D game for the treatment of children with general anxiety problems, was proposed by Sharry et al., (2003). This game contains two on-screen dragons, the faster they race, the more players relax, as measured by their galvanic skin response. This incentive to learn relaxation techniques can be integrated into a wider treatment format. Video games also be realistic enough to generate successful graded exposure trials against phobias of spiders (Bouchard et al., 2006) and heights or enclosed spaces (Robillard et al., 2003). Virtual reality driving games, or their 2D equivalents can reduce fear of driving after an accident (Walshe et al., 2003). Graded exposure by virtual reality has been used to reduce fear of flying (Rothbaum et al., 2000) and fear of heights (Emmelkamp et al., 2002). However, certain studies indicate that virtual reality treatments may not be as effective as traditional approaches. For example, Dewis et al. (2001) demonstrates that while computer-aided replaces exposure is superior to the control, live graded exposure remains superior to both. Choi et al. (2005) compared a traditional 12-session panic control program to a shortened experimental treatment using virtual exposure, then found that the results of the experimental treatment have fallen signifi cantly behind at six months.

The Effect of Music on Studying Performance

2A Lin Yee Sum Rachel
Pui Ching Middle School

Introduction

Previous studies had shown that there is an effect of music on studying pe
(1975) found that college students performed better on reading comprehensio
rather than listening to preferred music. On the other hand, Schreiber (1988) s
students who listened to background music obtained higher grades than the one
will be discussed in this review.

The Effect of Music and Post-study Relaxa

Etaugh and Ptasnik (1982) conducted a test on 20 female and 20 male unc
of them were asked to study a passage for 10 minutes. Half of them studied the
while the other half of them studied with a preferred music brought by the stud
in each condition were asked to relax in the 10-minute post-study interval, ar
unrelated article to read. After that, students were asked to answer 5 multiple
passage they read at the beginning. At last, students were asked how frequent th

with music performed significantly better in silent environment than with mus
frequently studied with music performed better with music than in silent enviro
performance was insignificant.

Comparison of Single-Gender and Co-Educational Schooling: A brief Literature Review

2F Kwok Sze Yin
Pui Ching Middle School

Introduction

Most of the historic and elite schools in Hong Kong are single-gender schools. However, co-educational schools have gradually become the mainstream nowadays. The number of co-educational schools has been increasing in recent years. Whether single-gender or co-educational schooling benefits students has been a long-standing debate. Performance in Hong Kong Diploma of Secondary Education Examination (HKDSE) in the past showed that the top-scoring students were mostly from single-gender schools. However, Gumede (2011) suggested that co-educational classes benefit social learning. This review will examine the views of supporters of both schooling methods and discuss whether single-gender schooling or co-educational schooling is better for students.

Advantages of Single-Gender Schooling

Most of the studies by the scholars who supported single-gender education focused on the confidence of students and the differences between boys and girls. Single-gender education improves student's self-esteem and encourages them to assume leadership roles. Sather (2006) stated that it built confidence and helped students concentrate on their work by removing the distractions of dating and other social pursuits in a single-gender school. Therefore, she proposed that girls could feel free to join any activities and take on the leadership roles, while boys were allowed to speak up in class, without the fear of embarrassing themselves in front of girls.

Students tend to have higher achievements in academics when they have lessons that accommodate their different learning needs. According to Dee (2006), boys generally outperformed girls in math and science in the National Assessment of Educational Progress (NAEP) in the US since 3rd grade, while the girls scored higher than the boys in reading. Thus, Viet (2009) suggested that same-gender classrooms could eliminate the gender gap between boys and girls. Warrington and Younger (2005), as cited in Diop (2010), mentioned "the researchers found that the single-sex classroom format was remarkably effective at boosting boys' performance particularly in English and Foreign Languages, as well as improving girls' performance in math and science". Rowe (2000) approved that single-gender education accommodated the specific developmental needs of students, and same-gender classrooms appeared to be a program that raised test scores for both boys and girls.

教材套（STEAM for all）

STEAM 科學探究：把飲品保持冰凍

情境：

今天是學校的旅行日，中一級同學一起到郊外野餐，到中午的時候，你的組員有以下對話：

科學 S：公平測試、實驗設計
科技 T：圖像處理
工程 E：物料選取、設計實驗
藝術 A：用家友好概念
數學 M：選取適當的量度單位、繪畫折線圖

充滿好奇心的你決定探究一下汽水保持冰凍的情況。

Observation 觀察 *(What phenomenon can you observe from the above situation?)*

Exothermic and endothermic reactions
放熱(exothermic)及吸熱(endothermic)反應

科學 S：公平測試
科技 T： 吸熱和放熱反應的應用
工程 E： 設計應用裝置
藝術 A： 用家友好概念
數學 M： 記錄及比較數據

情境：

天氣開始轉冷，你班的一位同學 A 正在使用暖包取暖，同學 B 和他有一段對話。

同學 A：天氣真冷，幸好我有帶暖包回校。

同學 B：你有沒有留意，我們生活中很多的反應都是放熱反應，卻很少吸熱反應的例子。

同學 A：好像也是的，但我記得當我將維多 C 時放進水中時，水會變得更冷。

同學 B：是嗎？我沒有留意，會不會是所有物質溶於水都是吸熱反應呢？

同學 A：讓我們一起做實驗研究吧！

Observation 觀察 *(What phenomenon can be observed from student A?)*

(根據 A 同學的描述，他觀察到甚麼現象？)

Hypothesis 假說 *(Propose a hypothesis to explain the observed phenomenon)*

(提出假說來解釋觀察到的現象)

Which fruit battery produces the highest current?

哪一種蔬果電池(fruit battery)產生的電流(current)最大？

科學 S： 公平測試、實驗設計
科技 T： 量度電流
工程 E： 接駁電路
藝術 A： -
數學 M： 記錄及比較數據

Date 日期：_____

情境：

同學 A 和同學 B 正在為更換課室冷氣搖控掣的電池而煩惱。

同學 A：沒有電池，我們便不能開啟冷氣了。

同學 B：我聽聞可利用不同的金屬片和水果便可產生電能，有沒有興趣試試？

同學 A：可以一試呀，但我們要先做實驗找找如何才能產生最多的電能。

同學 B：讓我們一起做實驗研究吧！

Observation 觀察 *(What phenomenon can be observed from the student B?)*

(根據同學 B 的描述，他觀察到甚麼現象？)

Hypothesis 假說 *(Propose a hypothesis to explain the observed phenomenon)*

(提出假說來解釋觀察到的現象)

木塊游戲

3D18 倪子桉 3D22 鄧弘睿

1.我們手上一塊 1x2 的和三塊 1x1 的木塊，用盡以上的材料究竟可以有多少個組合去填滿一行 5 格的木網?

1x5

1x2

1x1(B1/B2/B3)

我們可以嘗試用排列或組合(Permutation or Combinatorics)的數學公式尋找答案。

首先使用公式，排列(Pnr)。找出每一個格木網可以放入木塊的可能性。

5 x 4 x 3 x 2 x 1

所以排列將會是=5!* =5x4x3x2x1=120 個排列

!=階乘(factorial)

a. 由於 A1,A2 將等於同一個木網，所以 A1,A2 兩格必須相連，格數將當作 4 格。而排列將會有=4!=4x3x2x1=24 個排列

b. 接著使用公式，組合(nCr)。找出究竟有多少個組合符合題目。

c. 排列/組合起來的(B)=24/3!*=**4 個組合**

3!=(3x2x1)

所以一行木網放上一塊 1x2 和 3 塊 1x1 的木塊可以有 4 個組合。

題目:數學不只是數字？說謊與說實話的典型邏輯問題

學校名稱: 香港培正中學
班級:中學三年級
作者姓名:陳迪晞, 石祐勤, 蔡儆翹
指導教師姓名:梁偉雄老師

摘要:本文希望通過研究「說謊與說實話」的典型邏輯問題，循序漸進地發掘其重要解題方式及邏輯概念, 並發掘其有關應用。

關鍵字:說謊與說實話、解題方式、邏輯

引言:只要提起數學, 普遍人都會想起數字、運算符號、方程等等, 而忽略了邏輯思考在數學中發揮的重要性。遇到邏輯問題時, 我們便須切換思考方式, 不單以數字和四則運算解決問題。我們採用「說謊與說實話」的典型邏輯問題，因為該題目的特色在於「非黑即白」，只有「說謊」與「說實話」的兩種可能，方便釐清複雜的邏輯順序。我們將從解決較淺白的題目入手, 逐步拓展至較複雜的題目, 發掘當中的規律、解題技巧及邏輯概念。

例子1:有兩個人(A與B), 其中一個人拿着玩具車, 各人都有一句陳述, 而至少有一人說謊。

A說：「我拿着玩具車。」
B說：「我沒有拿着玩具車。」

問哪個人拿着玩具車？

解)列出所有組合與可能
我們可把上述陳述按照排列組合分為四種情況:

TT	LT
TL	LL

當中的T代表說實話，L代表說謊話；而每格首個英文字母代表A的陳述，第二個英文字母代表B的陳述。

校本STEAM教育 - 總結

1. 擴闊學生在各領域中的識見（橫向）
2. 按學生個人興趣，發展潛能（縱向）
3. 提供平台讓學生應用所學知識（action research）
4. 強化學生在跨學習領域的綜合和應用知識與技能的能力（hands-on experience）
5. 建立正面價值觀
